Oroville Dam Auxiliary Spillway Incident

- The Department of Water Resources (DWR) will continue to monitor the status of the dam, spillways, and related structures to ensure their continued safety and stability.
- Flow to the Feather River will be reduced gradually to minimize risk to downstream levees per the Army Corps of Engineers operational requirements.
- On 04/10/17 at 1638 hours, the California State Warning Center (CSWC) received notification from DWR advising that spillway releases will be increased to 30,000 cfs at 0900 on Friday, 04/17/17.

Per the DWR Flood Operations Center and California Data Exchange Center (CDEC) [as of 04/11/17 at 0900 hours](#):

- Inflow: [23,584](#) cfs.
- Outflow: [12,854](#) cfs.
- The current lake elevation is [859.03](#) feet.

Mission Tasking

- 2017-SOC-33363: Road Repair (Butte County) – On Scene.
- 2017-SOC-34379: Caltrans engineer to visually inspect and conduct Impact-Echo Testing on the gated concrete spillway floor – On Scene
- 2017-CalOES-34685: Asbestos Monitor (Butte County) – Coordinating.
- 2017-SOC-31712: 2 Structural Engineers for evaluation of the Oroville Spillway Bridge (Butte County) – On Scene.

WEATHER OF CONCERN

Weather of Concern

- Unsettled weather continues this week with the first storm arriving to northwest California on today. This fast moving system will bring widespread rain, strong southerly winds, and mountain snow to Northern California.
- **Active Weather Warnings, Watches and Advisories by County:**
- http://www.wrh.noaa.gov/sto/brief/www_bc_cal.php - Temporarily unavailable.
- <https://alerts-v2.weather.gov/counties/CA>

WEATHER SYNOPSIS BY REGION

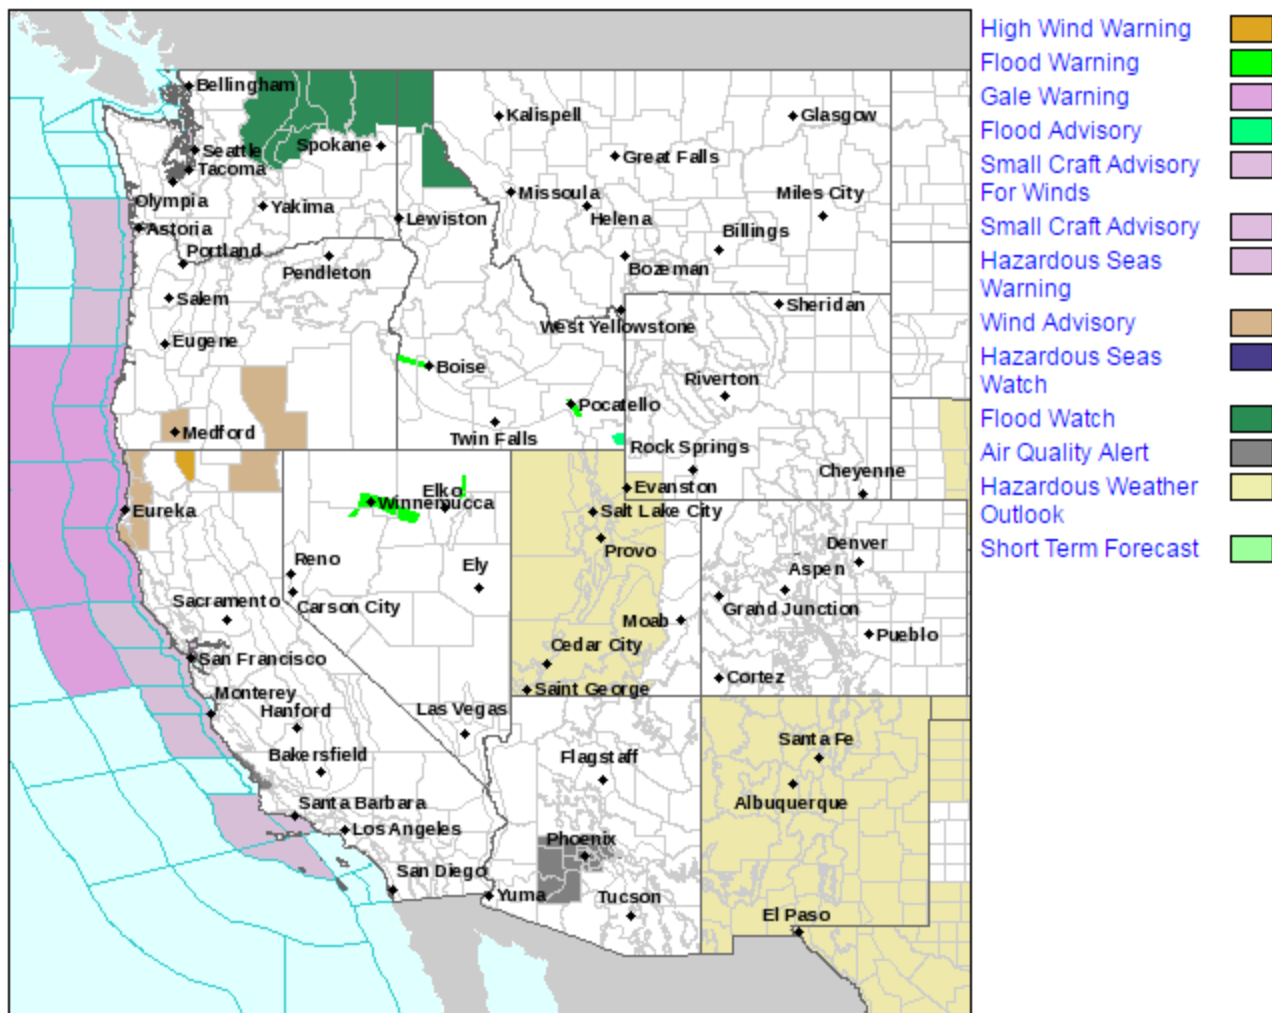

NORTHERN CALIFORNIA

An unsettled weather pattern will continue through the next 7 days as a series of wet, windy Pacific storm systems move through the region. One system will be moving through the region today, and without much break in between systems overnight, another, wetter system will arrive Wednesday. Precipitation from that system will be heaviest overnight Wednesday and linger but be more showery Thursday, especially in the northern and eastern areas. A few thunderstorms will also be possible Thursday. Showers will continue to hang around in the far northern areas Friday. Friday night through Sunday morning look dry, but not necessarily cloud-free across the Geographic Area. Sunday afternoon a small weather system will arrive just off the Bay Area coast and spread some light rain northward across the region. With no break between systems, another wetter system is expected Monday. Snow levels later Wednesday are likely to drop to 3500-4000 ft in the NW and 6500-7000 ft over the Sierra. There will be periods of moderately strong, gusty southerly winds accompany the approach of the weather systems this week with sustained speeds mostly 12-22 mph and strongest gusts of 30-40 mph. Temperatures will also be 5-12 degrees below normal for the next 3 days.

SOUTHERN CALIFORNIA

Zonal flow will maintain near normal temperatures through Wednesday, with 50s to low 60s across the mountains and upper 60s and 70s in the valleys. A Pacific trough will cool temperatures around 5 degrees Thursday. This trough will also bring scattered showers to Central California Wednesday evening through Thursday afternoon, with less than a quarter inch of rainfall. The snow level will be between 7,000 and 8,000 feet. South to west winds of 15 to 25 mph with gusts to 40 mph will surface across the mountain ridges and desert passes this afternoon through Thursday evening. A weak ridge of high pressure will build into California from the southwest bringing a little warming and drying Friday and Saturday. Another trough will bring a cooling trend and an increase in humidity Sunday through early next week. This trough will also bring scattered showers to Central California once again with light rainfall amounts. There will also be gusty south to west winds over the wind prone mountain and desert areas Sunday through early next week.
